Resetting iN•Command JRVCS2

Resetting the system can resolve a number of issues. It is quick and it could be said that it is always worth a shot to do.

1) Press and hold the **Power** button on the iN•Command Display until it powers off completely. *I always say "if you press the Home button now – nothing should happen if it is off". If it is on, the Home button would wake the display.*

2) Exit the vehicle and to the passthru/storage area beneath the RV. Find the BCM and remove the cover.

3) In the dead center of the board, not at the bottom and not at the top, there is a very small, unmarked, **Brown Button**. Press and hold this button for 2 Seconds and let go. A blue light will blink once at the top of the board when you let go – it will remain off.

4) Press and hold the **Power** button on the display until you see a flash of light.
